K. Evaluation of the Publications by Journal Rankings

My research interests pertain to the areas of strategic, tactical, and operations management as well as health economics. A special focus is given to optimal resource allocation using combined quantitative & qualitative methodologies and decision support systems for policy makers in health care and disaster management. My main topics include: 1) disease/injury prevention programmes, 2) investigation of hospital re-imbursement systems, 3) health care/disaster management games, 4) health care delivery, and disaster management. I have published more than 50 international articles (about 30 SSCI) as a result of international, national, and local interdisciplinary co-operations with both researchers and practitioners (see *publication list*). For example, I have collaborated with researchers from Stanford University, Carnegie Mellon University, University of Toronto, University of Southampton, Erasmus University Rotterdam, University of Greifswald, Vienna University of Economics and Business Administration, and Technical University of Vienna. I have presented my research at more than 140 international conferences and institutions including many invited talks and keynotes (see *publication list*).
